

Course description, module: Analyst

General

This module teaches how Testnet is used by Analysts. The module includes a comprehensive guide to the use of folders, tabs and fields. Exercises are performed to train participants in the practical operation of Testnet reports and analyze tools.

Target group

The module is designed for Analysts, the people who will use Testnet to search and analyze data.

Prior knowledge

General knowledge of how the different systems in a factory connect with Testnet.

Basic knowledge of the Testnet client.

Goals of the module

After completing the module, participants should:

- Understand all the tabs that they will use in their everyday work.
- Understand simple error messages, and prevent or correct such errors.
- Have sufficient practical knowledge so that they can immediately work with Testnet in actual production.
(Except for the individual adaptation based on the individual's specific assignments.)
