

## Course description, module: Operator/Repairer

### General

This module teaches how Testnet is used by Operators and Repairers. The module includes a comprehensive explanation of folders, tabs and fields. There are also exercises where participants can practise using some Testnet reports and Reptile, the trouble shoot and repair input client.

### Target group

The module is intended for Operators and Repairers, the people who use Testnet or Reptile in day-to-day production.

### Prior knowledge

General knowledge of Testnet, how different systems combine in the factory and an understanding of some of the terminology used in Testnet.

### Goals of the module

After completing the module, participants should:

- Understand all the tabs they will use in their normal work.
- Be able to understand simple error messages and know how to avoid and correct them.
- Have sufficient practical knowledge that they can immediately work with Testnet and Reptile in actual production.  
(Except for the individual adaptation based on the individual's specific assignments.)
